

Garden support – Going green growing green

Three of our project sites have gladly taken on gardening when assisted with supplies. This helps communities become more self-sufficient and provides healthy food for everyone to eat. Some times only shovels and seeds are needed to motivate a great project!

-The kids of Alices preschool learn how to plant and water the seeds as their daily school routine.

-Five youth from St. Mary's Children's home were also sponsored with your funds to go to an eco-leadership camp. They learned about recycling and how to plant their own gardens.

(PHOTO-A garden being dug for a soup kitchen with Cam Canadian volunteer and Deon a local youth).

Thank you again for helping our kids and families! Love Project COLORS
